

U.S. Wheat Associates

Harvest Report

May 19, 2017

Hard Red Winter

The 2017 HRW wheat harvest has officially started in Central Texas northward into southwest Oklahoma with the first loads of wheat delivered to handling facilities. This harvest is about a week ahead of the normal for this region. However, many wheat fields have not reached complete maturity, and wet conditions in Central Texas and northward may delay widespread harvesting for several days. Rain storms continued to move across north Texas and Oklahoma over the past few days and are also delaying harvest in this area.

Early yields reports ranged from 20 bu/ac to 40 bu/ac (1.3 tons/ha – 2.7 tons/ha) in both states with test weights ranging from 60 lb/bu to 65 lb/bu (78.9 kg/hl – 85.4 kg/hl). These preliminary reports may not reflect the overall crop. There are no official reports on protein at this point.

Damage assessments continue in Kansas from the freeze, late snow event and extensive disease pressure, especially in the western part of the state. In Oklahoma, disease pressure in all parts of the state and drought in the southern part of the state and far northwest after stand establishment remain a concern in relation to the final harvested acres and overall yield in the state.
