Hard Red Winter

The final 2015 HRW report was issued on September 4. A summary of the milling and baking data will be issued mid-October when all testing has been completed and data evaluated.

Hard Red Spring

Hard Red Spring harvest is near completion in the region with about 6% left to be cut. The results this week result in very little or no change from last week's report. Approximately 84% of the samples have been collected and analyzed. Average protein content remains at 14.2%, up from final average last year of 13.6%. Average test weight is 61.4 lb/bu (80.7 kg/hl) compared to last year's final average of 60.8 lb/bu (80.0 kg/hl). Average kernel damage is 0.2%, down from 0.4% last year. Average vitreous kernel content is 77% compared to last year final average of 60%. Falling number average is over 400 seconds indicating sound wheat. The average grade of the samples collected is No. 1 DNS.

Durum

Harvest conditions remained favorable this week and should continue to be favorable through the weekend. With about 70% of the expected samples analyzed, the average grade is No. 1 HAD, test weight is 60.7 lb/bu (79.1 kg/hl), total defects are 1.2%, and HVAC is 95%. Average protein content is 13.8% (15.7% db), 1000-kernel weight is 39.0 g, and Falling Number is 423 sec, all of which reflect excellent overall crop quality.
