Durum: a range of prices are available depending upon various quality attributes and logistics.

Northern Durum offers from the Great Lakes for December 2022 delivery are quoted at \$11.43/bu (\$420.00/MT). For Desert Durum offers, contact your supplier.

Hard White: a range of prices are available depending upon various quality attributes and logistics

*Hard Red Spring: HRS price indications in this report are for a 65% DHV content out of the PNW and G.L. and a 40% DHV content out of the Gulf; for specific NS/DNS DHV premium spreads, contact your supplier.

Legend: M = Minneapolis Grain Exchange; K = Kansas City Board of Trade; C = Chicago Board of Trade;

\$ = cash price quote; N/A = quote not available; closed = Great Lakes are closed to vessels for winter; ¢/bu = cents per bushel;

Futures Contract Month: H = March; K = May; N = July; U = September; Z = December

NS/DNS-Northern Spring/Dark Northern Spring (subclasses of Hard Red Spring); HRW=Hard Red Winter; SRW=Soft Red Winter; SW=Soft White; WW=Western White (White Club & Soft White)

F.O.B. = "Free on board" - Seller is responsible for placing grain at the end of the loading spout. Buyer is responsible for providing the ocean vessel and for all other costs after the grain is delivered on board.

Basis: The difference between the cash price and futures month for specific quality, shipping period and geographical location.

Cash: Durum, SW and WW are quoted in dollars per bushel (\$/bu.) rather than basis for each contract month.

Convert: To compute cash price, add basis level and current futures to get price per bushel. Multiply by 36.743 to get price per metric ton.

Example: Basis = 70 and Future Price = \$9.00, the price per bushel is \$9.00 + .70 = \$9.70/bu. Price per metric ton is \$9.70 * 36.743 = \$356/MT.

All prices are based upon U.S. number two grade or better as certified by the Federal Grain Inspection Service (FGIS).

The weekly prices as reported by U.S. Wheat Associates are compiled through research from numerous market sources, including U.S. wheat exporters of all classes from various U.S. ports. The prices reported are representative of the value of number two grade and the proteins indicated. **They are not intended to represent offers nor should importers of U.S. wheat rely upon them as such. Additional factors may alter these prices significantly.**

These factors may include: (1) payment terms (differing from cash against documents which are the terms used in the U.S. Wheat Associates price report); (2) various quality factors, and method of quality certification; (3) loading terms (USW prices represent Free on Board and do not include loading rate guarantees, stevedoring costs or other elevator tariff charges); (4) different delivery periods than indicated in monthly prices reported by U. S. Wheat Associates.

U.S. Wheat Associates recommends regular contact with exporters of U.S. wheat in order to receive offers representative of your requirements.

This contact will allow importers to review contract terms and better understand the U.S. grading system, role and function of the Federal Grain Inspection Service (FGIS).

Contact: For questions, please contact Michael Anderson at manderson@uswheat.org.

Weekly Price Report October 28, 2022

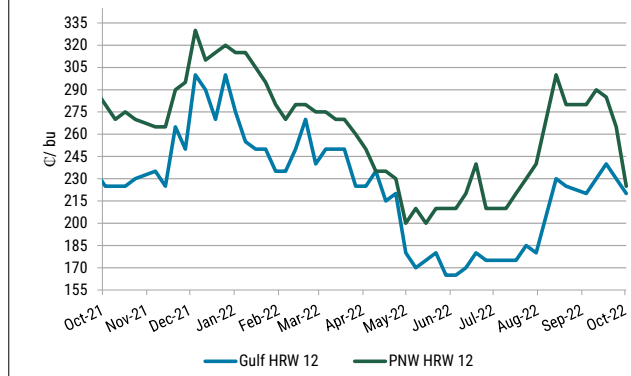

Daily Futures Settlement Prices

HRS Export Basis for Nearby Delivery

HRW Export Basis for Nearby Delivery

- December wheat futures ended the week down. CBOT soft red winter (SRW) futures were down 21 cents, to close at \$8.29/bu. KCBT hard red winter (HRW) futures were down 23 cents from last week, at \$9.25/bu. MGE hard red spring (HRS) futures were down 16 cents to close at \$9.45/bu. CBOT corn futures were down 4 cents, at \$6.80/bu. CBOT soybean futures were down 8 cents, at \$13.87/bu.
- This week, basis was down in both the Gulf and Pacific Northwest (PNW) except for SRW basis, which was higher. Gulf basis was pressured by exporter's efforts to recruit non-routine buyers to the Gulf. However, a strong corn and bean export program and the low river levels along the Mississippi River create more need for rail freight, a factor keeping SRW firm. In the PNW, basis fell significantly due to slacking demand across all wheat classes. The fall in basis this week allowed for more competitive prices, boosting U.S. wheat sales.
- The [USDA reported](#) that, as of October 23, 79% of winter wheat was planted, advancing 10 points from last week and 1 point ahead of the 5-year average. The emergence of newly planted winter wheat is 49%, 11 points behind the 5-year average of 56%.
- For the week ending October 20, net U.S. wheat commercial sales for delivery in 2022/23 were 533,200 metric tons (MT), above trade expectations of 100,000 MT to 450,000 MT. Year-to-date 2022/23 commercial sales total 11.8 million metric tons (MMT). The USDA expects 2022/23 U.S. wheat exports to total 21.09 MMT.
- A wide swath of the U.S. received above-normal rainfall this week, followed by cooler-than-normal temperatures. However, the rain was insufficient to show real improvement to the wide-ranging drought conditions that cover much of the wheat-growing areas in the U.S. In fact, only surface soil moisture saw measurable improvement, according to the weekly Drought Monitor. The Pacific Northwest, Montana, and Idaho were the primary beneficiaries of rainfall, where rain halted the expansion of dry conditions. Kansas Wheat Commission CEO Justin Gilpin said it best, "it takes a lot to get into a drought and a lot to get out of a drought."
- Parana, the second-largest wheat-producing state in [Brazil](#), will harvest between 3.7 and 3.5 MMT of wheat this season, said Deral, a state agency. Analysts said that around half the crop would have quality issues due to late-season rains while 300-400 TMT would be unusable as milling wheat. Neighboring Argentina, however, continues to suffer from dry weather. The Rosario Grain Exchange (BCR) has warned that the wheat crop could drop further, to 12.5-13.7 MMT. This is the third consecutive week of steep reduction forecasts by BCR. If realized, wheat production in Argentina would be down 40% compared to the all-time high produced last year, reported [AgriCensus](#).
- The USDA's [attaché](#) in Australia reported this week that Australia would likely produce its third-consecutive bumper grain crop in 2022/23. The attaché said the wheat harvest is projected to be the second-highest crop on record at 34 MMT. A good planting season, followed by above-average rainfall during the growing season, helped push the production projection up.
- An agreement to extend the Black Sea Grain Initiative remains unresolved, but United Nations (U.N.) negotiators remain hopeful. Ukraine's Infrastructure Ministry said that Russia is [deliberately slowing grain exports](#). According to a statement by the ministry, Ukraine's three open ports are operating at less than a third of their normal capacity. Russia continues to insist that there are "serious problems" with the deal they signed with Ukraine in July.
- The Baltic Dry Index (BDI), an assessment of the average cost to ship raw materials such as grains, coal, and iron ore, decreased 16% this week to 1,534.
- The U.S. Dollar Index decreased this week after weeks of continued strength. The index was 110.99, lower than last week's close of 113.2.
