**Durum:** a range of prices are available depending upon various quality attributes and logistics.

Northern Durum offers from the Great Lakes for April 2023 delivery are quoted at \$11.85/bu (\$435.00/MT). For Desert Durum offers, contact your supplier.

**Hard White:** a range of prices are available depending upon various quality attributes and logistics.

**Hard Red Spring:** HRS price indications in this report are for a 65% DHV content out of the PNW and G.L. and a 40% DHV content out of the Gulf; for specific NS/DNS DHV premium spreads, contact your supplier.

**Legend:** M = Minneapolis Grain Exchange; K = Kansas City Board of Trade; C = Chicago Board of Trade;

\$ = cash price quote; N/A = quote not available; closed = Great Lakes are closed to vessels for winter; ¢/bu = cents per bushel;

Futures Contract Month: H = March; K = May; N = July; U = September; Z = December

NS/DNS=Northern Spring/Dark Northern Spring (subclasses of Hard Red Spring); HRW=Hard Red Winter; SRW=Soft Red Winter; SW=Soft White; WW=Western White (White Club & Soft White)

F.O.B.= "Free on board" - Seller is responsible for placing grain at the end of the loading spout. Buyer is responsible for providing the ocean vessel and for all other costs after the grain is delivered on board.

Basis: The difference between the cash price and futures month for specific quality, shipping period and geographical location.

**Cash:** Durum, SW and WW are quoted in dollars per bushel (\$/bu.) rather than basis for each contract month.

**Convert:** To compute cash price, add basis level and current futures to get price per bushel. Multiply by 36.743 to get price per metric ton.

Example: Basis = 70 and Future Price = \$9.00 + .70 = \$9.70/bu. Price per metric ton is \$9.70 \* 36.743 = \$356/MT.

**All prices are based upon U.S. number two grade or better as certified by the Federal Grain Inspection Service (FGIS).**

The weekly prices as reported by U.S. Wheat Associates are compiled through research from numerous market sources, including U.S. wheat exporters of all classes from various U.S. ports. The prices reported are representative of the value of number two grade and the proteins indicated. **They are not intended to represent offers nor should importers of U.S. wheat rely upon them as such. Additional factors may alter these prices significantly.** These factors may include: (1) payment terms (differing from cash against documents which are the terms used in the U.S. Wheat Associates price report); (2) various quality factors, and method of quality certification; (3) loading terms (USW prices represent Free on Board and do not include loading rate guarantees, stevedoring costs or other elevator tariff charges); (4) different delivery periods than indicated in monthly prices reported by U. S. Wheat Associates. U.S. Wheat Associates recommends regular contact with exporters of U.S. wheat in order to receive offers representative of your requirements. This contact will allow importers to review contract terms and better understand the U.S. grading system, role and function of the Federal Grain Inspection Service (FGIS). Contact: For questions, please contact tyllorledford@uswheat.org

# Weekly Price Report February 10, 2023

- March '23 wheat futures ended the week up. CBOT soft red winter (SRW) futures were up 29 cents on the week, closing at \$7.86/bu. KCBT hard red winter (HRW) futures were up 36 cents, at \$9.09/bu. MGE hard red spring (HRS) futures were up 9 cents at \$9.30/bu. CBOT corn futures were up 3 cents, at \$6.81/bu. CBOT soybean futures were up 11 cents, at \$15.43/bu.
- A rally in wheat futures in response to Russian criticism of the Black Sea export corridor pressured basis this week. Overnight CBOT wheat futures gained 29 cents, KCBT 30 cents, and MGE 13 cents. This week's movements highlight the continued influence of geopolitical issues on market volatility. HRS basis was down in both the PNW and Gulf, weighed by futures prices. Weaker rail freight prices also helped draw down basis, though some regions still have poor performance. HRW basis was up in the Gulf and down in the PNW. Farmer selling has increased slightly; however, grain movement remains slow and demand light, especially as the U.S. Plains HRW crop condition remains uncertain. SRW basis and SW prices were steady, bouncing from lows in late January.
- For the week ending Feb. 2, 2023, net U.S. commercial wheat sales of 131,400 metric tons (MT) were reported for delivery in 2022/23, down 4% from last week and 56% below the four-week average. Commercial sales were within trade expectations of 120,000 to 450,000 MT. Year-to-date 2022/23 commercial sales total 16.3 million metric tons (MMT), 6% behind last year's pace. USDA expects 2022/23 U.S. wheat exports of 21.09 MMT.
- The [February USDA World Agricultural Supply and Demand Estimates](#) project global wheat production at 783.8 MMT, up 2.5 MMT from the January estimates. Global consumption increased by 1.4 MMT to 791.2 MMT, outpacing global output by 7.4 MMT. World wheat trade rose by 1.3 MMT to 212.9 MMT, while global ending stocks also increased 950,000 MT to 269.3 MMT. U.S. wheat [supply and demand](#) were largely unchanged.
- Light precipitation fell over the U.S. Southern Plains this week, coupled with cooler-than-normal temperatures. No significant improvements were made to the U.S. drought monitor but continued rainfall will be essential in some areas as the wheat crop emerges from dormancy.
- As the Black Sea export corridor approaches its March 19, 2023 expiration date, Russian officials have [voiced criticism](#) of the agreement citing barriers to Russian exports in the form of sanctions. In fact, Russian wheat exports reached record levels in January at 3.5 MMT, 120% above the January 2021 pace. Russia expressed hesitancy to extend the agreement and had a similar stance in November 2021 when the agreement approached its first expiry period; however the initiative was extended for another 120 days.
- Although wheat prices in India have remained elevated, the area planted with wheat in the world's second-largest wheat producer remains steady, increasing by only 0.4% to 34.3 million hectares. Indian [farm ministry data](#) showed that some farmers are shifting production to rapeseed to capitalize on higher returns.
- India may [extend the ban on wheat exports](#), set to expire in April 2023, to preserve domestic supplies and help cap prices. Wheat stocks are down 49.2 percent to a six-year low of 17.2 MMT, and the government hopes to replenish state wheat reserves after government purchases decreased by 53 percent in 2022.
- Tensions with China have returned to the forefront after the U.S. government shot down the alleged [Chinese spy balloon](#) on Saturday, February 4, 2023. Despite the recent friction, [agricultural exports to China](#) have reached a record \$36.4 billion for the fiscal year 2022. China is the 5th largest market for U.S. wheat in the marketing year 2022/23, with 750,000 MT purchased year-to-date.
- According to [Statistics Canada](#), wheat stocks as of Dec. 31 rose by 32.6% to 22.3 MMT as the country recovered from the low production levels brought on by drought in 2021. Despite the increase, Canadian wheat stocks are still at their lowest since 2015.
- The Baltic Dry Index (BDI), an assessment of the average cost to ship raw materials such as grains, coal, and iron ore, decreased by 3% on the week to end at 602, though Friday marked the first increase in over a month.
- The U.S. Dollar Index increased from last week's 102.5 to 103.63.
