## Harvest Report

October 3, 2014

### Hard Red Winter

The 2014 HRW harvest is complete. A final report on the 2014 HRW crop will be issued mid-October when all testing has been completed and data has been evaluated.

### Hard Red Spring

Hard Red Spring harvest is near completion. All of the samples have been collected and analyzed, although grades have not yet been received for the latest samples submitted for inspection. Average protein content is 13.4% (15.2% dry basis) which is lower than last year's final average of 13.6% (15.5% dry basis). Average test weight is 60.8 lb/bu (80.0 kg/hl) which is down from last year's final average of 62.3 lb/bu (81.9 kg/hl). Average vitreous kernel content is 57% compared to last years final average of 73% making the average grade of the samples collected No. 1 NS.

## Durum

Warm dry weather this past week allowed for continued good harvest progress. Average protein content is 13.3% on 12% moisture basis (15.1% dry basis). Average falling number of 294 sec is unchanged from last week but down sharply from the 2013 average of 384. Average test weight of 59.0 lb/bu (76.9 kg/hl) is similar to last week's average of 59.1 lb/bu (77.0 kg/hl). Average vitreous kernel content (HVAC) is 74.3%, which is up from last week's 72.0. The average grade of the samples collected remains No. 2 AD.
