### Hard Red Spring

Hard Red Spring harvest is complete and wheat data has been reported from all samples collected. The quality lab is moving forward with flour and dough testing on the composites. Average protein content is 13.6% (15.5% dry basis) which is equal to last year's final average. Average test weight is 60.8 lb/bu (80.0 kg/hl) which is down from last year's final average of 62.3 lb/bu (81.9 kg/hl). Average falling number is over 350 seconds and average vitreous kernel content is 60% making the grade of the samples collected No. 1 NS.

## Durum

This is the final weekly report for the 2014 durum wheat harvest survey. The average grade is No. 2 HAD, which is down from last year's average of No. 1 HAD. Average protein, thousand kernel weight, test weight, and vitreous kernel content (HVAC) have decreased from last year. Kernel moisture, damage and total defects are up compared to last year. The weathered kernels and low values for vitreous kernel content (75.3%), falling number (291 sec) and test weight (58.6 lb/bu or 76.3 kg/hl), all reflect the damp conditions that prevailed during harvest.
